CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier III validation deliverables including summary forms and all of the associated raw data for each of the analyses. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt

Three water samples were received for analysis at Columbia Analytical Services on 03/07/07. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

General Chemistry Parameters

No anomalies associated with the analysis of these samples were observed.

Total Metals

No anomalies associated with the analysis of these samples were observed.

Nitrosamines by EPA Method 521

No anomalies associated with the analysis of these samples were observed.

Diesel Range Organics by EPA Method 8015B

No anomalies associated with the analysis of these samples were observed.

Gasoline Range Organics by EPA Method 8015B

No anomalies associated with the analysis of these samples were observed.

Volatile Organic Compounds by EPA Method 8260B

Initial Calibration (ICAL) Exceptions:
The primary evaluation criterion was exceeded for Acetone, cis-1,3-Dichloropropene, trans-1,3-Dichloropropene, and Bromoform in ICAL ID CAL6077. In accordance with CAS standard operating procedures, the alternative evaluation specified in the EPA method was performed using the mean Relative Standard Deviation (RSD) of all analytes in the calibration. The result of the mean RSD calculation was 8.6%. The calibration meets the alternative evaluation criteria. Note that CAS/Kelso policy does not allow the use of averaging if any analyte in the ICAL exceeds 30% RSD.

The CAS minimum relative response factor criterion for 2-Butanone (MEK) was not met in ICAL ID CAL6077. In accordance with CAS standard operating procedures, a Method Reporting Limit (MRL) check standard containing

Approved by Stephen Salerno **Date** 4/2/07

the analyte of concern was analyzed each day of analysis. The MRL check standard verifies instrument sensitivity was adequate to detect the analyte at the MRL on the day of analysis. Because the sensitivity was shown to be adequate to detect the compound in question, the data quality is not significantly affected. No further corrective action was appropriate.

Lab Control Sample Exceptions:
The advisory criterion was exceeded for Methylene Chloride in Laboratory Control Sample (LCS) KWG0703662-3. As per the CAS/Kelso Standard Operating Procedure (SOP) for this method, this compound is not included in the subset of analytes used to control the analysis. The recovery information reported for this analyte is for advisory purposes only (i.e. to provide additional detail related to the performance of each individual compound). No further corrective action was required.

Surrogate Exceptions:
The control criteria were exceeded for the Toluene-d8 surrogate in Matrix Spike NKGW02CLMS and Duplicate Matrix Spike NKGW02CLDMS. The associated matrix spike recoveries of target compounds were in control, indicating the analysis was in control. The surrogate outlier is flagged accordingly. No further corrective action was appropriate.

No other anomalies associated with the analysis of these samples were observed.

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of Columbia Analytical Services, Inc. (CAS). This report contains analytical results for samples designated for Tier III validation deliverables including summary forms and all of the associated raw data for each of the analyses. When appropriate to the method, method blank results have been reported with each analytical test.

Sample Receipt

Five water samples were received for analysis at Columbia Analytical Services on 06/07/07. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

General Chemistry Parameters

Nitrite by EPA 300.0
Nitrate by EPA 300.0
Fluoride by EPA 300.0
The reporting limit is elevated for Nitrite in samples BHWGW01CL and 1349MW100CL and for Fluoride and Nitrite in sample 1349MW100CL. The chromatograms indicated the presence of Chloride. The matrix interference prevented adequate resolution of the target compounds at the reporting limit. The results are flagged to indicate the matrix interference.

No other anomalies associated with the analysis of these samples were observed.

Dissolved Metals

No anomalies associated with the analysis of these samples were observed.

Diesel Range Organics by EPA Method 8015B

No anomalies associated with the analysis of these samples were observed.

Gasoline Range Organics by EPA Method 8015B

No anomalies associated with the analysis of these samples were observed.

Organochlorine Pesticides by EPA Method 8081A

Continuing Calibration Verification Exceptions:
The primary evaluation criterion was exceeded for Toxaphene in CCV 0619F038 and 0621F022. In accordance with CAS standard operating procedures, the alternative evaluation specified in the EPA method was performed using the average percent recovery of all analytes in the verification standard. The standard meets the alternative evaluation criteria.

Approved by _____ **Date** 7/3/07

Elevated Method Reporting Limits:
The reporting limit is elevated for all analytes in sample 1349MW100CL. The sample extract was diluted prior to instrumental analysis due to relatively high levels of non-target background components. The results are flagged to indicate the matrix interference.

No other anomalies associated with the analysis of these samples were observed.

Volatile Organic Compounds by EPA Method 8260B

Initial Calibration (ICAL) Exceptions:
The primary evaluation criterion was exceeded for Bromomethane, Methylene Chloride, 2-Chloroethyl Vinyl Ether, 2-Hexanone, and Styrene in ICAL ID CAL6287. In accordance with CAS standard operating procedures, the alternative evaluation specified in the EPA method was performed using the mean Relative Standard Deviation (RSD) of all analytes in the calibration. The result of the mean RSD calculation was 9.4%. The calibration meets the alternative evaluation criteria. Note that CAS/Kelso policy does not allow the use of averaging if any analyte in the ICAL exceeds 30% RSD.

The CAS minimum relative response factor criterion for 2-Butanone (MEK) was not met in ICAL ID CAL6287. In accordance with CAS standard operating procedures, a Method Reporting Limit (MRL) check standard containing the analyte of concern was analyzed each day of analysis. The MRL check standard verifies instrument sensitivity was adequate to detect the analyte at the MRL on the day of analysis. Because the sensitivity was shown to be adequate to detect the compound in question, the data quality is not significantly affected. No further corrective action was appropriate.

Continuing Calibration Verification (CCV) Exceptions:
The upper control criterion was exceeded for Methyl tert-Butyl Ether, Vinyl Acetate, 2-Chloroethyl Vinyl Ether, Acetone, 2-Butanone (MEK), 2-Hexanone, 4-Methyl-2-pentanone (MIBK), and Bromoform in CCV MS04\0620F010.D. The field samples analyzed in this sequence did not contain the analytes in question. Since the apparent problem equates to a potential high bias, the data quality is not affected. No further corrective action was required.

Surrogate Exceptions:
The client specific upper control criterion was exceeded for the Toluene-d8 surrogate in samples 1349MW100CL, 231GW29CL, FM14EX07GW102CL, TB0606071ACL, Method Blank KWG0706882-4, Matrix Spike 1349MW100CLMS, Duplicate Matrix Spike 1349MW100CLDMS, and Lab Control Sample KWG0706882-3. The surrogate recoveries are within CAS control charted acceptance limits. No target analytes were detected in samples 231GW29CL, FM14EX07GW102CL, TB0606071ACL, and Method Blank KWG0706882-4. The error associated with an elevated recovery equates to a high bias for these samples. Target analytes were detected in sample 1349MW100CL. The sample in question was reanalyzed one day past the recommended holding time. The results of the reanalysis confirmed the detections in the original analysis. The results of the original analysis are reported. The quality of the sample data is not significantly affected. No further corrective action was appropriate.

Lab Control Sample Exceptions:
The advisory criterion was exceeded for 4-Methyl-2-pentanone (MIBK), 2-Chloroethyl Vinyl Ether, 2-Hexanone, Acetone, and 2-Butanone (MEK) in Laboratory Control Sample (LCS) KWG0706882-3. As per the CAS/Kelso Standard Operating Procedure (SOP) for this method, these compounds are not included in the subset of analytes used to control the analysis. The recovery information reported for these analytes is for advisory purposes only (i.e. to provide additional detail related to the performance of each individual compound). No further corrective action was required.

No other anomalies associated with the analysis of these samples were observed.

Polynuclear Aromatic Hydrocarbons by EPA Method 8310

Continuing Calibration Verification (CCV) Exceptions:
The upper control limit was exceeded for the analyte Dibenz(a,h)anthracene in the DAD signals for CCVs KWG0706622-1, KWG0706622-2 and KWG0706622-3. The elevated results appear to be due to an unresolved

Approved by _____ **Date** 7/2/07

artifact (it is present in the instrument blank analyses as well). The FLD signal results for the compound in the standards meet the primary evaluation criteria. The analyte was not detected in the FLD signals for the associated field samples, thus no secondary signal confirmation result was required. No further corrective action was necessary.

The upper control limit was exceeded for the analyte Benzo(g,h,i)perylene in the FLD signal for CCV KWG0706622-2. The DAD signal result for the compound in the standard meets the primary evaluation criteria. The analyte was not detected in the DAD signal for the associated field samples, thus no secondary signal confirmation result was required. No further corrective action was necessary.

Elevated Method Reporting Limits:

Sample 1349MW10CL required dilutions due to the presence of an elevated level of Fluorene, and to the presumptive presence of elevated levels of Phenanthrene and Fluoranthene. The reporting limits are adjusted to reflect the dilutions.

The reporting limits are elevated for Pyrene, Phenanthrene and Fluoranthene in sample 1349MW10CL. The chromatograms indicated the presence of non-target background interferences which prevented adequate resolution of the target compounds at their reporting limits. The results are flagged to indicate the matrix interferences.

No other anomalies associated with the analysis of these samples were observed.

G4 Sample was received past the end of recommended holding time.
R1 High RPD is because the duplicate sample results are less than three times the method reporting limit.
i MRL is elevated because of matrix interferences and the sample required diluting.
F Sample filtered primary to analysis.

CAS Standard Identification Codes and Abbreviated Footnotes for Chromatograms

G1 Sample was analyzed past the end of recommended holding time. See Nonconformity sheet.
G2 Sample was reanalyzed past holding time. Initial analysis was performed within recommended holding time.
G4 Sample was received past the end of recommended holding time.
R1 High RPD is because the duplicate sample results are less than three times the method reporting limit.
i MRL is elevated because of matrix interferences and the sample required diluting.
F Sample filtered primary to analysis.
